Camp Wright Cadet Camp

Located between Long and Narrow Lakes

54°36'20.5"N 113°38'10.3"W

**LNLSS welcomes ...**

**Roland Dechesne**, Calgary Centre of the Royal Astronomical Society of Canada

## **7 pm      Dark Sky Preserves**

One place to become aware of good lighting practices is within Dark Sky Preserves, such as those recognized by the Royal Astronomical Society of Canada. Come learn more about why the LNLSS wants to have this area designated!

## **10 pm      What's up in the sky?**

The summer sky is dominated by the constellations of Cygnus the Swan and Aquila the Eagle both of which encompass a portion of the Milky Way. Though stars lives are measured in the 100's of millions to billions of years, we can glimpse different stages of the story of the birth and deaths of stars amongst the various telescope targets in these constellations.
