

**Science Outreach –Athabasca  
presents...**

**How the clean energy  
revolution is  
changing your future**

**Speaker: David Dodge, Green Energy Futures & EEA Chair**

**Date: Thursday, January 11, 2018**

**Time: 7:00 PM to 8:30 PM**

**Place: Athabasca University Governing Council Chambers**

Take a peek into our energy future with David Dodge, the producer of 175 Green Energy Futures documentaries on the clean energy revolution and the chair of Energy Efficiency Alberta. The pace of innovation in the energy sector and the building industry is stunning and the implications are profound. Solar, wind and other clean energy technologies have grown faster than anyone predicted and this is creating a much more decentralized energy system in which businesses and individuals are becoming energy producers. Alberta is a national leader in the development of net-zero homes and is leading the way to a future of super energy efficient zero emissions buildings. Vancouver's Zero Emissions Building Plan will require all new buildings to achieve net-zero emissions by 2030. These changes are dramatic and exciting since they will increase resilience; avoid the risk of future energy costs and carbon levies. David will discuss innovation in energy efficiency, renewable energy and how this will affect our homes and lives in the future.
